

MAC LESSON #2

SHUTTING DOWN WITHOUT WAITING

When you select Shut Down from the Apple menu, you get one of those boring dialog boxes that asks you if you really want to shut your Mac down. Here's a way to make that dialog box take a hike.

All you have to do is hold down the Option key before you click on Shut Down. Now your Mac just shuts down and you don't have to deal with the Are You Sure dialog box any more. It's fast and it's easy.
