

MAC LESSON #12

EJECT A BLANK CD

When you insert a blank CD or DVD into your Mac, look in the Finder window Sidebar and you'll see a Burn button next to your blank disk. Well that's all find and well, but there is no Eject button anywhere to be found. So how can you eject that blank media?

It's easy. Just click on the Burn button to bring up the Burn dialog box, and on the left side of that box you'll find the Eject button alive and well. It works.
