

MAC LESSON 13

O/S 10'S HIDDEN DICTIONARY

I recently discovered a hidden dictionary built into the Mac OS 10 operating system. I've seen it now in both Panther and Tiger. It's really easy to use.

All you have to do is highlight any word in a document or Web page, press and hold down both the CTRL and the Apple key, and while holding them down, tap the letter D.

A window will open that defines the highlighted word. In the lower right corner of the window, you can click on the word More and a new window will open and give you a dictionary page about your highlighted word.

This is a very useful tool. Enjoy it.
