

MAC LESSON #22

SING ALONG WITH A MUSIC LYRICS WIDGET

MAC OS X Version 10.4, better known as Tiger, has a new feature called the Dashboard, which contains Widgets, little applets that do various things for you. Widgets let you check the time, watch the weather, track flights, view stock prices and find a local restaurant. Instantly with a single click.

Apple iTunes music store lets you download music, and I found a Widget called Sing That iTune that lets you sing along with your favorite iTune songs by providing you with the lyrics as you listen to the music. This is a knockout concept. Here's how to get this exciting new Widget.

Log onto www.apple.com/downloads/dashboard/music/singthatitune.html and follow the steps and download the Sing That iTune Widget. Then install the new Widget. Now when you listen to music, you might be able to "sing along" with the lyrics that appear onscreen. Have fun.
