

## **MAC LESSON #24**

### **FIND SAFARI KEYBOARD SHORTCUTS**

Safari is to the Mac what Internet Explorer is to the Windows PC. Both are browser software programs that let us browse the Internet. Safari is fairly easy to use with mouse clicks, but some of us still like to use our keyboards. Safari has a treasure of built-in keyboard short cuts available to anyone who takes the time to find them. Here's how it's done.

Open your Hard Drive by clicking on its icon on your Desktop. Now open the Applications folder. Hold the Control key down and click on the Safari icon. Now choose Show Package Contents from the Contextual menu. This brings up a folder named Contents. Look inside for a folder named Resources. Open the resources folder and locate a folder named "English.lproj."

Now look inside that folder for a folder named "SafariHelp" and then inside that folder open "pgs2" there you will find a file named "shcts.html." Double-click this file to see a very complete list of Safari's keyboard shortcuts.
