

MAC LESSON #32

VIEW MULTIPLE VERSIONS OF THE SAME WIDGET

There is an interesting "trick" you can do with Widgets, a brand new feature of the Tiger Operating System. You can have more than one of the same widgets open at the same time. So how would this be useful for you?

For starters, if you have travel plans, you can have several Weather Widgets open at the same time, each set to a different city. Now that's cool. How do you set this up?

It's simple. Just drag as many Widgets as you need from the Widget bar. Now you can configure each one separately. This is fun.
