

## MAC LESSON #34

### WIDGET WATCHES WEATHER WORLDWIDE

One of the Tiger Widgets I really enjoy playing with is the Weather Widget. You can check the weather in almost any city in the world. It's easy.

Lookin the lower right corner of the Weather Widget and you'll notice a very small letter i. Click on the i and the Widget will rotate and display its backside. There, you will see the default city the Widget is set to display weather for.

Just type in the city you are interested in, like Tokyo, for example, and press the Return key. A list of cities will appear. Click on the city you want to select and press the Return key to select it. Now click on Done.

I just love this one.
