

MAC LESSON #78

REALLY FAST SHUT DOWN

In my PC lessons I teach a fast way to shut down a Windows computer by pressing and releasing the Windows key and then tapping the letter U twice.

When you shut down your Mac, you have to deal with the alert that says "Are you sure you want to shut down your computer now?" and then you have to confirm that you really do want to shut down.

So the trick to a fast shutdown for your Mac is to press and hold the Option key and then click on the Apple icon and then on Shut Down in the drop-down menu.
