

MAC LESSON #116

FIND RELATED WORDS IN THE DICTIONARY

When you look up a word, phrase, abbreviation, etc, in the Dictionary Dashboard widget, you will see a little half-circle to the left that contains the first letter of the item you looked up.

Clicking on that half-circle will bring up a list of related words, or words having the original word in them. For example, look up memory and then click on the "M" in the half-circle to see a list of words starting with memory bank, memory banks, etc.

Clicking any of those words/phrases will jump to that entry in the dictionary. If you don't select a word, clicking the "M" again will return you back to the definition of memory.

This is a great little tip and it also works in the Thesaurus mode.
