

LESSON 191

CLEAR OUT THAT RUN MENU

When you click on Start and then Run, as you type in a command, Windows displays a Run menu containing previously used Run commands. If that gets annoying after a bit, here's how to remove it.

Click on Start and then on Run. Type "REGEDIT" in the run box (without the quotes) and click OK or press Enter.

Open HKEY_CURRENT_USER and then click on Software, Microsoft, Windows, Current Version, and Explorer and then on RunMRU. On the right side of your screen you'll see a list that starts with the (Default) icon. Every icon below that represents an entry on the Run menu. To remove an item from the Run menu, left-click on its icon and then click Delete. To delete an entire series, highlight the first one, hold down the shift key and then click on the last one. That entire section will then be highlighted. Right-click anywhere on the highlighted section and click Delete.

NOTE: DO NOT delete the (Default) or MRUList values.

Click on the X in the upper right corner of the Registry Editor window to close it. The next time you start your computer, the Run menu will be empty.
